

FrameCo

CORNER WINGS

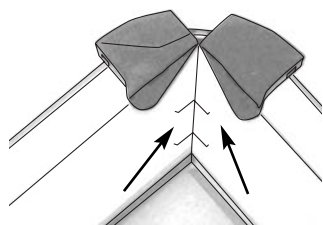

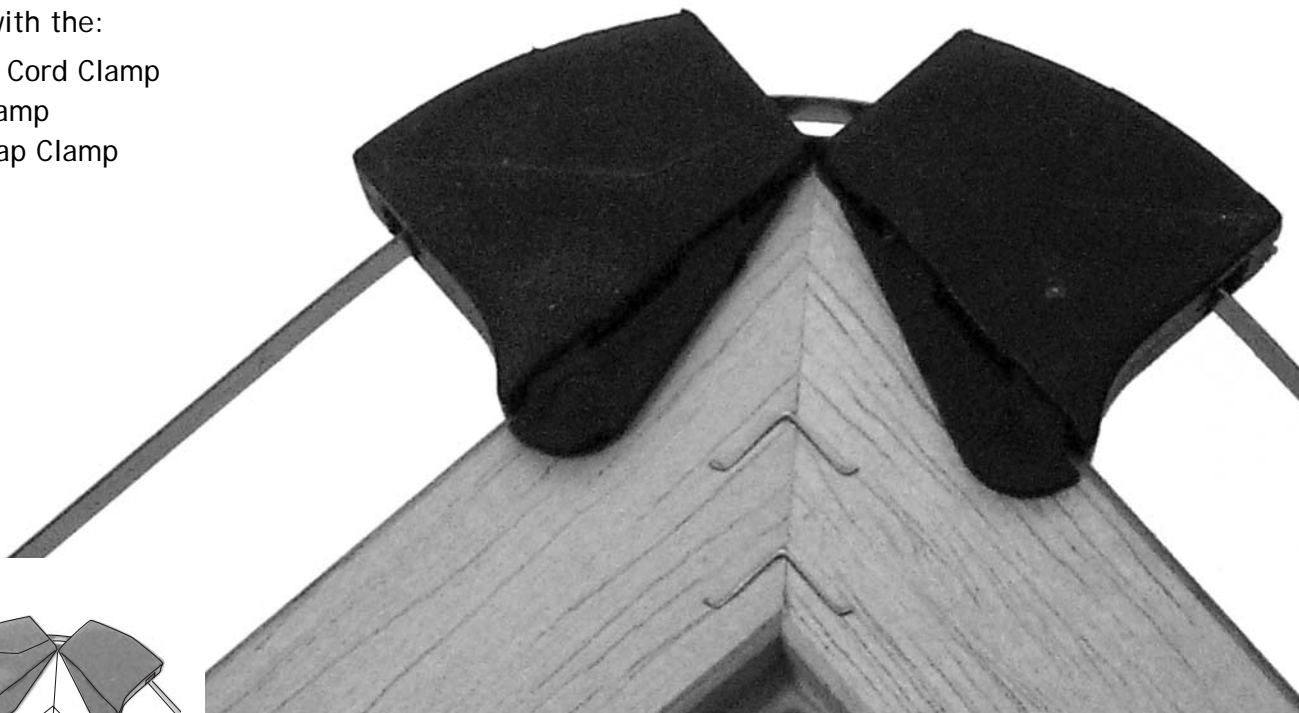

#10105

FRAME SUPPORT SYSTEM

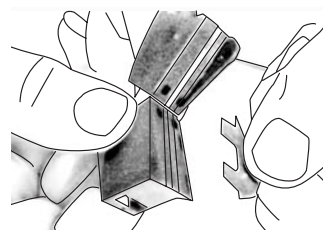

Corner Wings

Included with the:

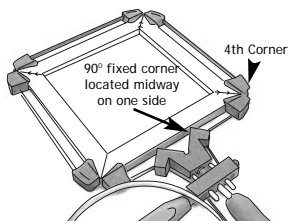

- FrameCo Cord Clamp
- Hobbi Clamp
- Steel Strap Clamp

Fit wings when joining rounded back frames

Press fit wing into slots

Add the fourth corner - the 90° fixed corner is located midway on one side

Instructions

1. Your FrameCo clamp also comes with the new corner "wings". These wings fit onto the bottom of each corner piece preventing the clamp from slipping off the frame. Fit the corner wings when joining rounded or narrow backed moulding. Remove the wings for moving the corner piece higher up the moulding.
2. The groove running through the centre of the corner piece is also useful on some moulding which have a stepped back. Position the corner piece so that the groove is located on a ridge, or outside edge of the moulding.
3. It may be advisable to fit one extra flexible corner to the strap if the frame profile is difficult to clamp. Then the fixed 90° corner of the clamp head can be moved to the centre of one side. The strap will hold the head away from the side so that it will not mark the frame side. The clamp can be tightened in the normal way.
