BEAM OFFSET KIT

#14726

FOR USE WITH THE BENCHMASTER

The Beam Offset kit enable the cross beam of the BenchMaster® to be moved forward from its original position.

The driving head, ie the PushMaster®, is thus moved forward clear of the support legs.

large items such as Standbacks or frames which are wide and would not normally fit between the legs of the BenchMaster®, can have hardware items fitted to them using the Benchmaster®.

1. Sawtooth Hangers can be applied to the top of frames using the Sawtooth Application Head fitted to the PushMaster®.
2. Standback Hinges or Brackets can be applied to the back of a frame using the Applicator Heads fitted to the PushMaster®.

Installation:

Assemble the parts as shown in the diagram. Make sure that the leg uprights are located inside the extension supports. The cross beam can be set at any position on the extension slideway.
