How to use the Coin Cutter

1. Fit the oblique blade as shown in the diagram. Align the blade with the tip of the spike - they should be about the same level.

2. Set the size of the circle required by adjusting the handle on the sliding bar. To loosen the handle twist it anti-clockwise. Set the size with a rule - it is the distance between the spike and the tip of the cutting blade.

3. Push the spike into the board - make sure there is a scrap of board under your mat, and rotate the blade clockwise. This will begin to cut the circles.

4. Keep the board steady by securing with double sided tape onto a larger slip mat.

5. Change the blade frequently for a clean even cut.
